Reply to Office Action dated September 22, 2004

Listing of Claims:

1. (Currently Amended) A dolly having assembled members interconnected by tubular members to form a frame for receiving a rectangular member therein, the assembled member comprising:

an upper and a lower element made of plastic material connectable to form the assembled member, the upper and lower members forming an essentially hollow cavity therein, said assembled member having side access apertures for receiving an end of the tubular member into said cavity, said side access apertures open to a common through channel in said cavity for receiving portions of the tubular members therein and wherein the channel has a projection extending into the channel at a predetermined location for defining a stop means for limiting the travel of the end of the tubular member into the channel.

2. (Previously Presented) The dolly of claim 1, wherein the upper element has an exposed surface for receiving a portion of the rectangular member and an interior surface, said exposed surface having at least one raised wall for defining edges of the dolly.

3. (Original) The dolly of claim 2, wherein the exposed surface of the upper element is grooved to correspond with a corner bottom portion of the rectangular member.

4. (Previously Presented) The dolly of claim 1, further comprising a caster wheel rotatably connectable to each lower element, the lower element has an exposed lower surface having at least one aperture therein for receiving a connecting means of the caster wheel and an interior surface.

5. (Cancelled)

6. (Cancelled)
